V Household Questionnaire and Trip Diary 58, 64

The summer year 1982 study, which was conducted by Canadian Parks, involved about 4,000 households each maintaining a travel diary for a two month period. Data qualifying trip taken by a member of the household was recorded in detail. Full details on survey methodology are contained in the Technical Appendix.

## FORWARD

1

The Ontario Ministry of Tourism and Recreation commissioned this study in order to determine the travel habits and characteristics of Ontario residents travelling within the province. Travel by non-residents of Ontario is excluded. This information will be of assistance for the preparation of both marketing and development programs for this Travel Association Area in addition to general economic planning.

Travel data for this regional profile cover the following: origin of travellers, length of stay, seasonality, purpose of trip, accommodation used, activity participation, distance travelled, mode of transportation, expenditures, and socio-economic characteristics.

This calendar year 1982 study, which was conducted by Canadian Facts, involved about 4,300 households each maintaining a travel diary for a two month period. Each qualifying trip taken by a member of the household was recorded in detail. Full details on survey methodology are contained in the Technical Appendix.

For any further queries in regards to the methodology employed or to this publication, please contact:

Tourism Research Section

## HIGHLIGHTS

### ONTARIO NORTH

#### (a) Visitation

There was a total of 8.429 million travellers to this Travel Association Area, or about 10 per cent of the total number of resident travellers in Ontario. Approximately 71 per cent originated in Ontario North.

This area was the destination for about 8 per cent of all resident same day person-trips to the province, and about 14 per cent of all overnight person-visits.

The region receives a significantly greater proportion of overnight trips than does the province as a whole. Fifty-three percent of Ontario North visitors spent at least one night compared with only 36 percent for the province.

Approximately 47 per cent of the overnight travellers to this area visited during the months of July, August or September, as compared to 40 per cent for Ontario as a whole.

Recreation/pleasure is the main trip purpose mentioned by a majority (51 per cent) of overnight visitors to this region. Visiting friends or relatives is mentioned second most often (38 per cent).

Within the region, non-commercial accommodation is used for about 68 per cent of person-nights. Campgrounds or trailer parks are the most often used form of commercial accommodation.

Shopping and participation in outdoor or sporting activities are the two most often mentioned activities in the region.

About nine out of ten same day person-trips to the region come from within one hundred miles. Overnight visitors to the region tend to travel farther than the average Ontario overnight traveller.

#### (b) Expenditure

A total expenditure of \$476.2 million was made in this area, or about 12 per cent of the total expenditure within Ontario. Residents of Ontario North generated the largest expenditure (\$292.4 million) in the region.

Ontario North has an average expenditure of \$56.50 per-person trip. This is higher than the provincial average of \$48.18.

Retail and other miscellaneous items constituted the largest expenditure category. Ontario North visitors spent \$128.8 million on these items or about 27 per cent of the total regional expenditure.

(c) **Socioeconomic Characteristics of  
Overnight Travellers**

Comparing overnight visitors to the region with overnight visitors to the province, it can be seen that the region has a younger visitor profile. This appears to be a function of the overrepresentation of two age groups to the region, the under fifteen year olds and the 35-44 year olds.

About 31 per cent of overnight visitors to the region have attained post-secondary education, which is a somewhat lower proportion than for the province as a whole.

Two-thirds of overnight visitors to the region come from households where the chief wage earner is a professional/business person or a skilled labourer.

Ontario North receives more overnight visitors from the middle income group, and fewer from the upper income group than does the province in general.

## DETAILED FINDINGS

# ORIGIN OF SAMEDAY TRAVELLERS TO REGION AND PROVINCE

\* Less than 0.5%.

## TRIP CHARACTERISTICS

### (i) Same Day Travel By Origin Region

Origin	Destination			
	Region		Province	
	#	%	#	%
Ontario North	3,824	95.8	4,230	7.9
Metro Toronto	60	1.5	9,082	17.0
Georgian Lakelands	49	1.2	4,375	8.2
Central Ontario	28	0.7	8,162	15.3
Southwestern	26	0.7	6,797	12.7
Ontario East	5	0.1	6,742	12.6
Festival Country	-	-	<u>14,035</u>	<u>26.3</u>
Total (Base: Person-Trips ('000)) (1)	3,992	100.0	53,423	100.0
Average Party Size Per Trip:	1.76		1.88	

Ontario North was the destination for 3.992 million same day person-trips or 7 percent of the total same-day person-trips taken within the province.(2) The region receives the lowest share of the same day market of all Ontario regions. The primary reason for this small number is the region's distance from most large population centres and the relatively sparse population of the region itself. Because of the large area which the region covers and its geographic location, almost all of its same day visitors are from within the region itself.

The region's average same-day party size is slightly smaller (1.76 persons) than for the province in general (1.88). This may reflect the region's higher incidence of travel for the purposes of shopping and personal business which is more likely to be done singly or in a small party.

(1) See Appendix III for definition.

(2) See Appendix Table II-A for total of same day person-trips for all destination regions.

# ORIGIN OF OVERNIGHT TRAVELLERS TO REGION AND PROVINCE

(ii) **One Or More Nights Travel By Origin Region**

Origin	Destination			
	Region		Province	
	#	%	#	%
Ontario North	2,136	48.1	3,008	9.8
Metro Toronto	920	20.7	9,653	31.4
Festival Country	517	11.7	6,187	20.1
Central Ontario	377	8.5	4,095	13.3
Georgian Lakelands	173	3.9	1,638	5.3
Ontario East	167	3.8	2,803	9.1
Southwestern	<u>147</u>	<u>3.3</u>	<u>3,380</u>	<u>11.0</u>
Total (Base: Person-Visits ('000)) (1)	4,437	100.0	30,764	100.0
Average Party Size Per Trip:	1.98		1.84	

Ontario North was the destination for 4.437 million person-visits, which account for 14 per cent of all overnight person-visits within the province.(2) Contrary to the same day situation where the region ranked seventh out of seven, Ontario North receives the third largest number of overnight visits. Only Georgian Lakelands (21 per cent) and Central Ontario (19 per cent) receive more overnight visits.

As is found in the case of most regions, the largest number of overnight visitors to the region come from the region itself (48 per cent). Metro Toronto (21 per cent) and Festival Country (12 per cent) are the next largest generators of visitors to the region.

The average party size (1.98 people per trip) is slightly larger than the provincial average of 1.84.

(1) See Appendix III for definition.

(2) See Appendix Table II-A for total of overnight person-visits for all destination regions.

# TRAVELLERS BY LENGTH OF STAY IN REGION AND PROVINCE

\* Overnight is reported in person-visits, while same day is in person-trips.

(iii) Length Of Stay

<u>Length of Stay</u>	<u>Destination</u>			
	<u>Region</u>		<u>Province</u>	
	<u>#</u>	<u>%</u>	<u>#</u>	<u>%</u>
Same Day (1)	3,992	47.4	53,423	63.5
One or More Nights (2)	<u>4,437</u>	<u>52.6</u>	<u>30,764</u>	<u>36.5</u>
Total	8,429	100.0	84,187	100.0

As discussed earlier, the region's geography and size result in its having a much lower proportion of same day trips and a much higher proportion of overnight trips than the province in total.

(1) Pertains to Person-Trips ('000).

(2) Pertains to Person-Visits ('000).

# SAMEDAY\* TRAVELLERS BY SEASON

IN REGION AND PROVINCE

# OVERNIGHT\* TRAVELLERS BY SEASON

IN REGION AND PROVINCE

\* Overnight is reported in person-visits, while same day is in person-trips.

(iv) Seasonality By Length Of Stay

Season	Destination	
	Same Day	One or
	(1)	More Nights
	%	(2)
		%
Jan./Feb./Mar.	20.0	12.6
Apr./May/June	24.7	21.3
July/Aug./Sept.	30.8	46.5
Oct./Nov./Dec.	24.5	19.6
Total	100.0	100.0
Base: ('000)	3,992	4,437

Although in both cases, the summer quarter receives the greatest proportion of trips, overall same day trips tend to be more evenly distributed over the four calendar quarters. Overnight trips to the region are much less concentrated in the winter quarter (13 per cent) and more concentrated in the summer (47 per cent) compared to Ontario as a whole.(3) This may be due in some part to the realities of the climate.

- (1) Pertains to Person-Trips to the region.
- (2) Pertains to Person-Visits to the region.
- (3) See Appendix Table II-B for seasonality of travel in Ontario in general.

## SAMEDAY TRAVELLERS BY TRIP PURPOSE FOR REGION AND PROVINCE

## OVERNIGHT TRAVELLERS BY TRIP PURPOSE FOR REGION AND PROVINCE

\* Less than 0.5%.

## (v) Trip Purpose By Length of Stay

Main Purpose	Destination			
	Region		Province	
	Same Day	One or More Nights	Same Day	One or More Nights
	%	%	%	%
Visiting Friends/ Relatives	21.6	38.3	32.4	42.9
	47.0		62.3	
Recreation/ Pleasure	25.4	50.9	29.9	44.1
	89.2		87.0	
Personal Business	19.2	5.7	14.8	6.0
Other Business	10.5	3.7	8.7	4.2
Attending Convention	2.8	1.3	1.5	2.1
Shopping	20.6	0.2	12.7	0.7
Total	100.0	100.0	100.0	100.0
Base:				
Person-Trips ('000)	3,992	4,027	53,423	28,537

Although visiting friends/relatives and recreation/pleasure rank as the top two trip purposes for both same day and overnight person-trips, they are far more important in the case of the longer trip. In fact, nine out of ten overnight trips have as their main purpose one of these reasons, with recreation/pleasure cited more often than visiting friends/relatives.

The profile of the overnight visitor to the region in terms of purpose resembles that of the provincial traveller with a slightly greater emphasis in the region on recreation/pleasure and less on visiting friends/relatives. For the same day visitor to the North, visiting friends or relatives takes on even less importance as a main purpose than for the provincial traveller (22 per cent versus 32 per cent). Personal business and shopping are more important motivators for same day travel in the North than in the province in general.

# TYPE OF ACCOMMODATION USED FOR REGION AND PROVINCE

(vi) Accommodation

	Destination				
	Region		Province		
	#	%	#	%	
Friends/Relatives	6,669	39.6	38,283	46.2	71.9
Private Cottage	4,708	28.0	21,282	25.7	
Camping/Trailer Park	2,792	16.6	11,253	13.6	
Hotel/Motor Hotel	708	4.2	4,886	5.9	
Motel	439	2.6	2,370	2.9	
Commerical Cottage/Cabin	667	4.0	2,761	3.3	
Resort Lodge	489	2.9	1,669	2.0	
Outfitter/Outpost	<u>364</u>	<u>2.2</u>	<u>439</u>	<u>0.5</u>	
Total(Base: Person-Nights ('000))	16,836	100.0	82,943	100.0	

Within the region, non-commercial accommodation is used for about 68 per cent of person-nights. Forty per cent of person-nights are spent with friends/relatives and 28 per cent are spent at a private cottage. This is fairly consistent with the distribution found for the province as a whole.

Of the commercial accommodation used in the region (32 percent of total person-nights), camping/trailer park accounts for the largest proportion.

## (vii) Activities Participated In At Main Destination By Length Of Stay

<u>Activities</u>	<u>Same Day</u>	<u>One or More Nights</u>
	%	%
Went Shopping	34.8	31.1
Participated In Outdoor Or Sporting Activity	17.0	54.4
<b>Attended ...</b>		
Sporting Events	6.8	8.2
Live Theatre, Dance or Music Concert	2.1	6.4
<b>Visited ...</b>		
Museums, Galleries	0.1	2.6
Historical Site	0.7	3.4
Exhibitions, Fairs, Special Events	3.5	2.2
Attractions, Zoos, Amusement Parks	1.8	2.5
Went on Boat or Rail Tours	1.2	7.0
Other Activities	<u>42.7</u>	<u>42.2</u>
Total (1)	<u>110.7</u>	<u>160.0</u>
Base: Person-Trips ('000)	3,992	4,027
Average No. of Activities per Person-Trip:	1.11	1.60

The two most important activities reported on both same day and overnight trips are shopping and participation in an outdoor or sporting activity. The latter is reported on overnight trips three times as often as on same day trips.

Attending sporting events is mentioned on 7 per cent of same day and 8 per cent of overnight trips. Most of the other activities measured tend to have a greater proportion of overnight trips associated with them than same day trips. This is most likely because the longer overnight trip allows for more activities. Consistent with this is the finding that the average number of activities per person-trip associated with overnight trips is greater (1.60) than same day trips (1.11).

(1) Percentages add to more than 100 per cent as person-trips can be associated with multiple activities.

## SAMEDAY VISITS BY DISTANCE TRAVELLED TO REGION AND PROVINCE

## OVERNIGHT VISITS BY DISTANCE TRAVELLED TO REGION AND PROVINCE

\* Less than 0.5%.

## (viii) Distance Travelled To Main Destination

Distance	Destination			
	Region		Province	
	Same Day	One or More Nights	Same Day	One or More Nights
	%	%	%	%
25-49mi/40-79km	54.8	18.9	55.4	13.3
50-99mi/80-159km	32.5	14.2	33.7	30.2
100-199mi/160-320km	10.0	29.5	9.4	36.5
200-499mi/321-804km	2.7	30.1	1.5	17.4
500mi/805km and over	-	7.4	*	2.6
Total	100.0	100.0	100.0	100.0
Base:				
Person-Trips ('000)	3,992	4,027	53,423	28,537

Consistent with the time restrictions inherent in a same day trip, almost all same day trips are within 100 miles from home. This is true for both same day trips to the region (87 per cent) and within the province in general (89 per cent).

The distribution of overnight trips taken to Ontario North, however, differs from similar trips within the province. Overnight visitors to the region tend to travel farther than the average Ontario overnight traveller. Only 33 per cent of overnight person-trips to the region come from within 100 miles compared with 44 per cent of Ontario-wide trips. On the other hand, about 38 per cent of overnight trips to the region are from a distance of 200 miles or more. This is compared to only 20 per cent of Ontario-wide travel. Once again, these longer distances travelled to or within the region are mainly a function of the greater distances between population centres.

\* Less than .05%.

## (ix) Mode Of Transportation By Length of Stay

<u>Mode</u>	<u>Same Day</u>	<u>One or More Nights</u>
	%	%
Automobile/Van	97.4	93.5
Bus (Scheduled/Chartered)	2.1	3.8
Air (Scheduled/Chartered)	0.1	1.2
Train	-	0.9
Ship/Boat	-	-
Other	<u>0.3</u>	<u>0.6</u>
Total	100.0	100.0
Base: Person-Trips ('000)	3,992	4,027

The dominant mode of travel, regardless of length of stay, is the automobile. The incidence of other modes is only slightly higher for overnight trips.

# TOTAL EXPENDITURE BY ORIGIN IN REGION AND PROVINCE

## TRIP EXPENDITURES

## (i) Expenditure By Origin Region

Origin	Expenditure (Millions of Current \$)			
	Destination			
	Region		Province	
	\$	%	\$	%
Ontario North	292.4	61.4	380.3	9.4
Metro Toronto	68.1	14.3	1,208.2	29.8
Festival Country	46.5	9.8	779.3	19.2
Ontario East	22.1	4.6	554.0	13.7
Central Ontario	20.5	4.3	437.1	10.8
Southwestern	13.8	2.9	468.6	11.5
Georgian Lakelands	<u>12.8</u>	<u>2.7</u>	<u>228.3</u>	<u>5.6</u>
Total	476.2	100.0	4,055.8	100.0

Ontario North receives 12 per cent of total tourism revenue generated within the province or \$476.2 million. This region ranks fifth among the seven Travel Regions in total amount of tourism expenditure generated.(1)

Consistent with the pattern found throughout the province's regions, residents of Ontario North overwhelmingly generate the largest share of tourism expenditure in the region (61 per cent) at \$292.4 million. Lagging far behind is the next largest generator of tourism revenue to the region, Metro Toronto, at \$68.1 million.

The region itself receives over three-quarters (77 per cent) of the total tourism expenditures made by Ontario North residents in Ontario.

(1) See Appendix Table II-C for total expenditure by origin and destination regions.

# AVG. EXPENDITURE PER PERSON BY ORIGIN REGION

# AVG. EXPENDITURE PER PERSON BY DESTINATION REGION

ii) Average Expenditure By Origin and Destination Region

Average Expenditure  
Per Traveller Per Trip(1)  
(Current \$)

Origin of Travellers In Region		Destination Region	
	\$		\$
Ontario East	128.49	Ontario East	63.28
Festival Country	89.94	Metro Toronto	62.79
Southwestern	79.77	Ontario North	56.50
Metro Toronto	69.49	Southwestern	42.53
Georgian Lakelands	57.66	Central Ontario	41.26
Central Ontario	50.62	Georgian Lakelands	38.23
Ontario North	<u>49.06</u>	Festival Country	<u>37.76</u>
Regional Average	56.50	Provincial Average	48.18

As a destination region, Ontario North ranks third in terms of average expenditure made within the region (\$56.50 per person-trip). This above average expenditure for the region is probably a function of the higher incidence of commercial accommodation used and the above average length of stay for trips to this area.

While residents of the region account for the greatest proportion of Ontario North's tourism revenues due to their sheer volume, the average expenditure of a resident traveller ranks as the lowest. In fact, the highest average expenditure in the region is generated by Ontario East residents (\$128.49), followed by Festival Country (\$89.94) and Southwestern residents (\$79.77). The very high Ontario East average may be due in part to the longer travel distance between this region and Ontario North, resulting in a longer length of stay in the main destination region.

(1) Any length of stay.

## ITEMIZED EXPENDITURE

IN REGION AND PROVINCE

## (iii) Itemized Expenditure

Item	Expenditure (Millions of Current \$)			
	Destination			
	Region		Province	
	\$	%	\$	%
Retail/Other Miscellaneous	128.8	27.1	915.7	22.6
Automobile	117.0	24.6	798.6	19.7
Food/Beverage	108.2	22.7	934.5	23.1
Public Transportation (Canadian Carriers)	51.6	10.8	832.6	20.5
Accommodation	41.7	8.7	289.3	7.1
Recreation/Pleasure	28.9	6.1	285.1	7.0
Total	476.2	100.0	4,055.8	100.0

The major expenditure items for Ontario North are retail (27 per cent), automobile (25 per cent) and food/beverage (23 per cent). Public transportation, which is a major expenditure item for the province, is greatly underrepresented in the region. This is due to a large extent, to the limited availability of public transportation in that region. As a result, automobile expenditures are overrepresented in this region.

# AGE OF OVERNIGHT TRAVELLERS IN REGION AND PROVINCE

\* Less than 0.5%.

# SOCIO-ECONOMIC CHARACTERISTICS OF OVERNIGHT TRAVELLERS

## (i) Age Of Overnight Travellers

Age	Destination	
	Region	Province
	%	%
Under 15 years	20.1	17.2
15 - 19 years	6.4	6.1
20 - 24 years	8.1	8.7
	34.6	32.0
25 - 34 years	17.9	18.9
35 - 44 years	18.5	14.7
	36.4	33.6
45 - 54 years	11.8	13.5
55 - 64 years	10.1	12.3
65 Years and Over	6.5	8.4
	28.4	34.2
Did Not State	0.6	0.3
Total	100.0	100.0
Base: Person-Visits ('000)	4,437	30,764

Any grouping of travellers by age is, to a large extent, an arbitrary one. Looking at the distribution of travellers by age, however, we find that the numbers lend themselves to division into approximately thirds. About one-third of the province's overnight travellers are under 25 years, another third between 25 and 44 years, and another third 45 years and over. Comparing overnight visitors to the region with visitors to the province, we find that Ontario North appears to be getting more younger visitors than the overall province. This appears to be a function of the overrepresentation of two age groups in particular, the under 15 year olds and the 35-44 year olds.

# EDUCATION OF OVERNIGHT TRAVELLERS

IN REGION AND PROVINCE

## (ii) Education Level of Overnight Travellers

Education(1)	Destination	
	Region %	Province %
Public/Elementary	12.7	9.3
Secondary/High School	55.7	48.8
Post-Secondary (Non-university)	13.3	14.3
University	17.3	27.0
No Formal Schooling	0.2	0.1
Did Not State	0.7	0.6
Total	100.0	100.0
Base: Person-Visits ('000)	3,543	25,475

About three in ten overnight visitors to the region have completed post secondary schooling. This is compared to four in ten visitors to the province in general who fall into this category. The difference in education profile is a result of a much lower incidence of university educated travellers in the region.

(1) Pertains to travellers 15 years of age and over.

# OCCUPATION OF OVERNIGHT TRAVELLERS IN REGION AND PROVINCE

(iii) **Occupation (Chief Wage Earner) Of  
Overnight Travellers**

Occupation	Destination	
	Region	Province
	%	%
Professional, Business Executive, Owner/Manager	27.1	33.4
Skilled Labour	39.4	30.5
Sales/Clerical	10.6	13.9
Skilled Labour	39.4	30.5
Unskilled Labour	6.4	4.9
Farmer	1.1	1.5
Retired, Pensioned	9.2	8.7
Student/Unemployed/ Homemaker	6.3	6.3
Did Not State	-	0.6
Total	100.0	100.0
Base: Person-Visits ('000)	4,437	30,764

A disproportionately large number of overnight travellers to the region fall into the skilled labour grouping (39 per cent). On the other hand, the region receives fewer travellers from the professional/business category. This finding appears to be consistent with the lower number of university educated visitors to the region.

Sales and clerical workers make up the next largest group (11 per cent) in the region.

# HHOLD INCOME OF OVERNIGHT TRAVELLERS

IN REGION AND PROVINCE

(iv) Household Income Of Overnight Travellers

Household Income	Destination	
	Region	Province
	%	%
Less than \$12,000	8.2	8.3
\$12,000 - \$17,999	9.6	10.0
	17.8	18.3
\$18,000 - \$23,999	20.4	16.9
\$24,000 - \$29,999	18.6	18.1
	39.0	35.0
\$30,000 - \$39,999	24.8	22.9
\$40,000 and over	17.1	21.9
	41.9	44.8
Did Not State	1.2	2.0
Total	100.0	100.0
Base: Person-Visits ('000)	4,437	30,764

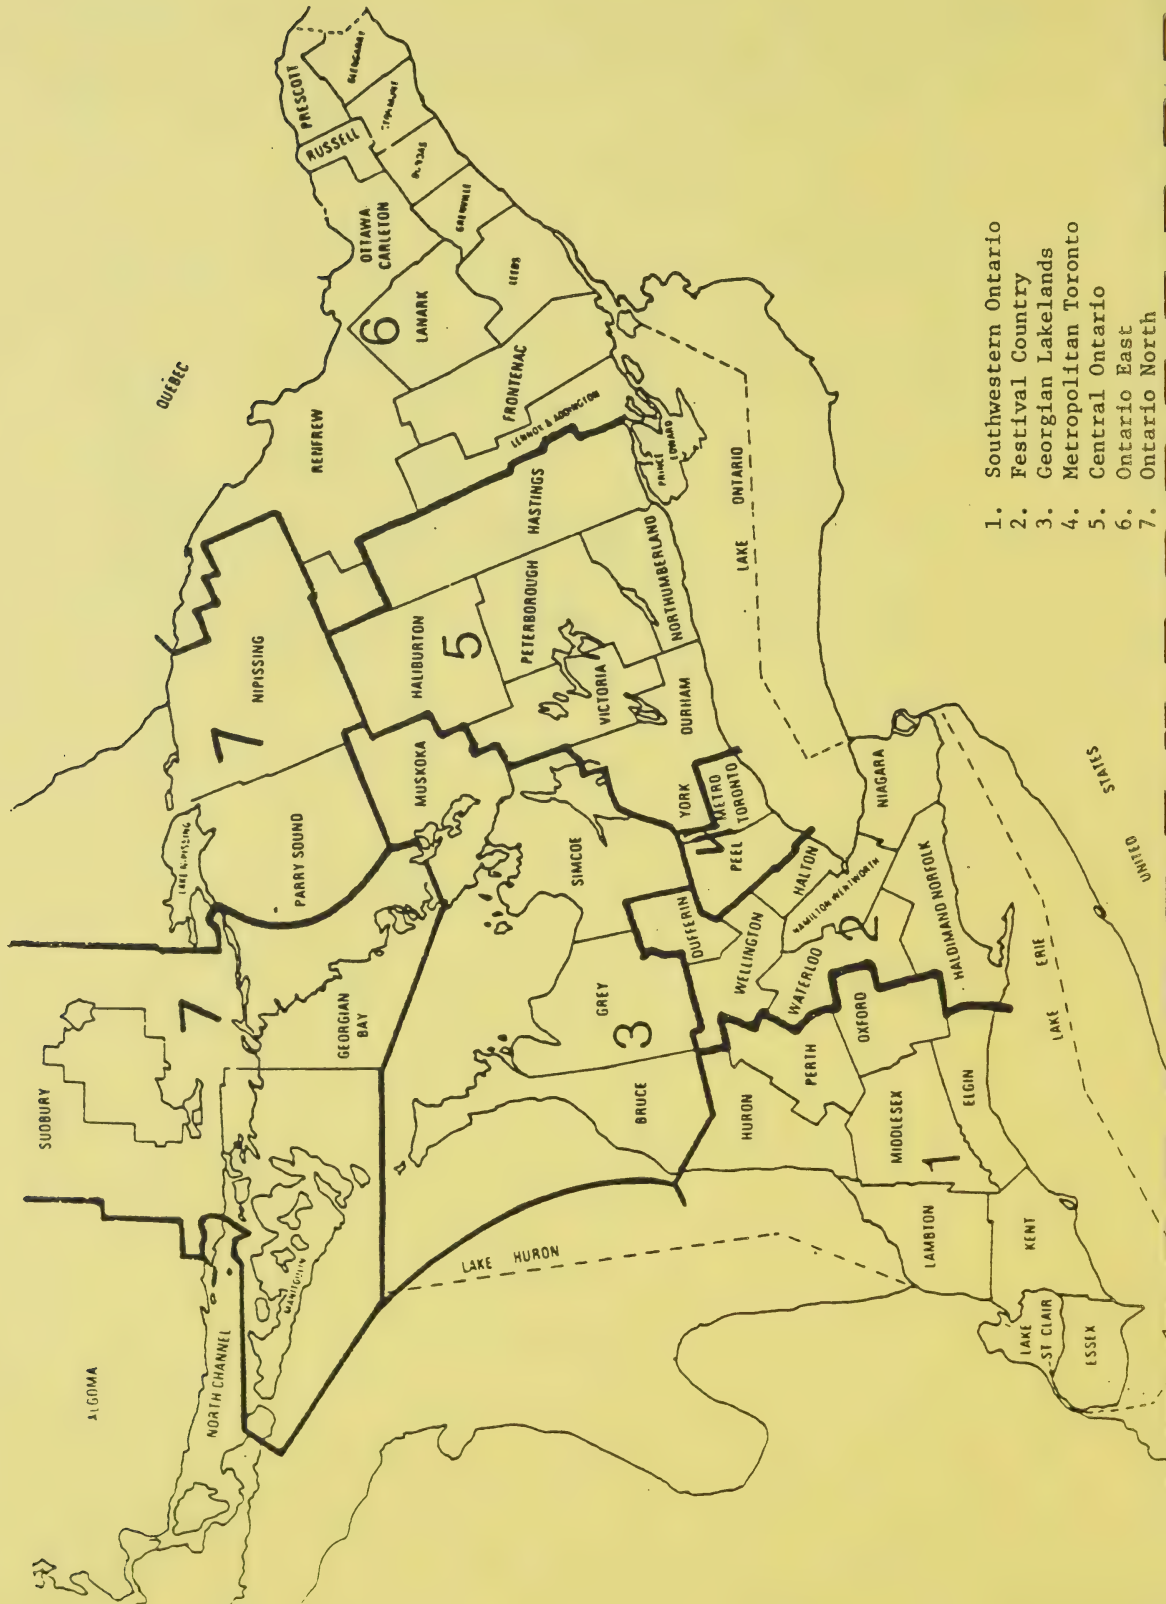

Eighteen per cent of the overnight travellers to the region are from households having a total income of less than \$18,000, 39 per cent are in the mid-income range of \$18,000 - \$29,999, and 42 per cent fall within the \$30,000 and over grouping.

The province as a whole has proportionately fewer travellers in the mid-income range, and more in the upper income grouping.

## **APPENDIX III**

### **DEFINITIONS**

## **A. MEASUREMENT OF HOUSEHOLD TRAVEL**

### **1. Household-Trip**

A trip involving one person or a group of persons from the same household, leaving and returning together. For example, if four persons from one household leave and return together, it counts as one household-trip. If they all belong to different households, it counts as four household-trips.

### **2. Person-Trip\***

A trip taken by one person, either singly or in a group. If four persons go on a trip together, it counts as four person-trips.

### **3. Person-Night**

A night spent by a person on a trip. For example, if two persons take a trip involving three nights away from home, there is a count of six person-nights.

### **4. Person-Visit\***

A person-trip which is counted more than once if there is an overnight stop in more than one area of the province. For example, if two persons stop overnight in one area and then stop overnight in another area, there is a count of four person-visits.

\*During the survey, two methods were used to ascertain the destination of each trip. The respondent was asked for his/her main destination (or place furthest from home) on each trip. This approach, although simplest, does not enable an accurate measure of the actual number of people visiting each region. For example, a resident of southwestern Ontario might give Ottawa as his main destination, when, en route, he also stayed overnight in Metro Toronto and Belleville. Thus in order to estimate the number of visitors to each region more accurately, respondents were also asked to name every place where they had stayed overnight.

## **B. EXPENDITURE TYPES**

### **1. Automobile**

Expenditure on gas/oil/maintenance during trip or prior (when part of prepaid package), and also pertains to trucks, campers and other recreational vehicles such as boats, snowmobiles, etc. Included also are rental costs for autos or other motor vehicles.

### **2. Public Transportation**

Expenditure on fares paid to Canadian carriers only, either during trip or prior (when part of prepaid package), for any destination. Includes local transportation expenditure within the local area or any places stopped at during the trip, and pertains to taxis, public transit, etc.

### **3. Accommodation**

Expenditure made in regards to commercial accommodation rooms/units, either during trip or prior (when part of prepaid package).

### **4. Food/Beverage**

Expenditure on food either during trip or prior (when part of prepaid package), and on beverages, and includes food and/or beverage portion of accommodation bills.

### **5. Recreation/Pleasure**

Expenditure made either during trip or prior (when part of prepaid package) on user fees, admissions and rental fees, and pertains to such items as recreational facilities, sporting events, amusement parks, attractions, night clubs, theatres, cultural activities, fish and game licences, rental of boats, snowmobiles, equipment, etc.

### **6. Retail/Other Miscellaneous**

Retail trade purchases during trip on such items as souvenirs, gifts, medical costs, clothing, personal services (i.e. laundry, barber, etc.), art, appliances, furnishings, etc.

## **APPENDIX IV**

### **TECHNICAL REPORT**

## A. THE SAMPLE

### 1. Universe Covered

The universe sampled was all households in Ontario, excluding military bases, Indian reserves, institutions and the most remote northern areas.

### 2. Sampling The Universe

The sample was drawn in four main quarterly sample replicates, each representing the Ontario population of households. Each quarterly sample was then randomly allocated into three monthly samples.

The primary sampling unit (PSU) was the Enumeration Area (E.A.). The selection of PSU's was carried out separately for urban areas of 10,000 population or more and for rural/small urban areas.

#### a) Urban Areas--10M Population or Greater

Each of the urban areas in Ontario with population 10M or greater was represented at least once. In total, 50 localities were included. For each locality, EA's were randomly selected proportionate to population from a list of stratified EA populations. The stratification variables were income within geographic area.

The selected EA's were then stratified by city size within six geographic regions of the province and allotted in sequence to each of the four quarterly samples. Each of the quarterly samples were then allocated in the same manner to each of the three months of the quarter.

#### b) Small Urban and Rural Areas

For rural and small urban areas, 86 areas were selected proportionate to population from a cumulative list of such locations. Within each of the selection locations, an average of 2.8 PSU's were selected based on the geographically stratified EA's within the location. Each of the PSU's was then allocated to a separate quarter of the year.

Within each selected PSU (EA) a block (or route in the case of rural areas) was selected at random. The households were selected at specific intervals on the block. No substitution of these households was permitted. A 9-household cluster size in urban areas and an 8-household cluster size in rural areas was specified.

## B. THE TRIP

The main purpose of the study was to determine the number of qualifying trips by households and individuals, and to describe those trips in terms of origin, destination, purpose, activities, mode of transportation, expenditure and accommodation. A qualifying trip was defined as a round trip to a location of at least 25 miles one way from home, for a purpose other than:

- commuting to school or work
- as an operator or crew member of commercial carriers (including trucks)
- for sales calls or deliveries

Within a household all qualifying trips were covered except those by children under 15 when not accompanied by an adult (15+) member of that household.

## C. DATA COLLECTION

Prior to production of the final field materials, the household questionnaire, the Trip Diary and the interviewer instructions were subjected to field pre-tests. The final pre-test entailed the installation of 25 diaries and the completion of 24. Field procedures and the questionnaire formats were examined in detail subsequent to completion of the pre-test. Changes indicated by the pre-test were incorporated into the final documents used in the study.

### 1. Fieldwork

The data were collected by two methods:

- 1) A personal interview.
- 2) A diary left with the household for a two month period.

Up to four visits were made to obtain contact and cooperation from the households. At the initial interview information was obtained on basic household and individual characteristics, and recent travel. Instruction was also given on the completion of the diary and eventual collection.

During the two month diary period three interim telephone calls were made to the person responsible for the diary. The first took place as close as possible to the second day of the first recording month, the second at the beginning of the second month, and the third just a day or two prior to scheduled pick-up. The purpose was to motivate continuance in the project and to clarify any aspects of reporting that might have arisen. At the end of the period the diary was personally collected. The completeness of the record was reviewed at this time.

### Specific Field Controls

When Trip Diaries were first placed in a household, interviewers described the features that would facilitate completion by the respondent.

### Four Example Trips

Narrative descriptions of four "example" trips were presented at the front of the Trip Diary, along with corresponding "completed" diary pages. Respondents were taken through a minimum of one of these examples by the interviewer at the time the diary was placed.

### Trip Recording Directions Fold-Out

The Trip Diary was constructed with a fold-out sheet at the back, and respondents were instructed to open the Trip Recording Directions fold-out while completing a Trip Diary page. In the extended position, the respondent would be faced with a Trip Diary page on the left, and recording instructions (along with reference codes for further discussion of an item in the guide) on the right. This

procedure was designed to ensure maximum accessibility to reference information as the trip information was being recorded, and was demonstrated to the respondent by the interviewer at the time of placement.

### **The Guide**

A detailed Guide for completing the Trip Diary, cross-referenced by item number to the Trip Recording Directions fold-out, was included in the Trip Diary binder. These detailed instructions included information on definitions, and provided examples of types of items that should be included in specific categories. Interviewers reviewed the Guide with respondents during the placement interview.

### **Travel Expense Log**

Portable Travel Expense Logs were provided in a binder pocket of the Trip Diary. These booklets were designed as memory aids in which respondents could log expenses as they occurred. Interviewers advised respondents to take the Log along on household trips, especially when such trips were to involve overnight stays. Respondents were also instructed to transfer information entered in the Log to the Trip Diary.

Other procedures in place in the course of the fieldwork to maximize the accuracy of the data included:

- a Diary Review Checklist of items in the Trip Diary to be examined by the interviewer at final retrieval. This checklist included an edit of the Trip Diary for internal consistency, missing information, and legibility; and
- a mail-back envelope for return of the Trip Diary if the respondent was not available for either of two pre-established retrieval interviews.

The person responsible for ensuring the diary was completed was typically the female head of the household. This procedure was intended to maximize response, since in the supplier's experience, greater cooperation is received from female heads of household, both in the acceptance and regular reporting of household diary studies. An incentive was offered. For each of the 12 sample months, diary completers were included in a draw for a cash prize of \$300. Of all households eligible to receive a diary 72 per cent were interviewed and 51 per cent both accepted and completed the diary.

## 2. Analysis Of Response

The figures below show the yield from the first stage household interview and the second stage diary completion for the four quarterly samples and in total.

	SAMPLE									
	Months 1-3		Months 4-6		Months 7-9		Months 10-12		Total 12 Months	
Total Households Assigned	2252		2145		2145		2117		8659

## D. EXPENDITURE DATA

The primary purpose of the expenditure data collected was to estimate the revenue that accrues to Ontario, and to different regions of Ontario, during qualifying trips. The trips recorded were of many different types:

- Trips within Ontario;
- Trips with destinations outside of Ontario;
- Overnight trips or same-day trips;
- Trips with stops in more than one region.

The allocation of expenditure for the different types of trip is described below.

For each household trip, total expenditure within Ontario and outside Ontario was collected in the following categories:

- Automobile;
- Local transportation;
- Air/train/bus/ship --Canadian carrier;  
                                    --Foreign carrier;
- Accommodation;
- Food/Beverage;
- Recreation/Pleasure;
- Retail Sales and Miscellaneous.

For trips paid by prepaid package or tour, the total amount of the package was obtained as well as the specific items included in the package.

In order to correctly allocate expenditure as accruing to Ontario, a number of specific edit rules were applied. These are described briefly in the following pages under two headings:

1. Prepaid Package Expenditure;
2. Non-Prepaid Exenditure:
  - a) Ontario Destination Travel;
  - b) Non-Ontario Destination Travel.

### 1. Prepaid Package Expenditure

- a) In order to allocate expenditures made on packages to individual items, it was necessary to determine the ratio of these items to each other. Therefore, for all trips without

prepaid expense, average expenditure per trip was calculated for specific categories of expenditure within classifications of trips. The matrix used was of the following type:

	Same Day Travel Destination				One Or More Nights Travel Destination			
	<u>Ont.</u>	<u>USA</u>	<u>Other Prov.</u>	<u>Other Country</u>	<u>Ont.</u>	<u>USA</u>	<u>Other Prov.</u>	<u>Other Country</u>
<b>Expenditure Category:</b>								
Automobile	X	X	X	X	X	X	X	X
Air, Train, Bus, Ship	X							
--Canadian Carrier	X							
--Foreign Carrier	X							
Accommodation	X							
Food/Beverage	X							
Recreation/Pleasure	X							

- b) For all trips with prepaid package the total number of trips in each of the above cells was determined.
- c) Using the average expenditure per trip determined in (a) above a total expenditure value for each category and in total was calculated for all trips with prepaid package.
- d) The derived category expenditure distribution obtained in (c) was then applied to the total dollar value given for the various duration/destination categories of trips with prepaid package.
- e) Itemized prepaid expenditure derived in (d) above was allocated as follows:

#### Ontario Destination Travel

- air/train/bus/ship--Canadian Carrier expenditure was assigned to region of origin.
- all other expenditure items were assigned to regions of main destination (or further point).

## Non-Ontario Destination Travel

- air/train/bus/ship--Canadian Carrier expenditure was assigned to Ontario region of origin.
- all other expenditure items were assigned to either USA, other province or other country, by items.

## 2. Non-Prepaid Expenditure

### a) Ontario Destination Travel

#### Automobile

Automobile expenditure was assigned on the basis of number of person-nights spent in any of the 12 Ontario destination regions. For same day travel (0 person-nights), the expenditure was assigned to the region of origin.

#### Local Transportation

- expenditure was assigned to region of main destination (or furthest point).

#### Air/Train/Bus/Ship

- Canadian carrier expenditure was assigned to region of origin.

#### Accommodation

- accommodation expenditure was assigned on the basis of number of person-nights spent in any of the 12 Ontario regions.

#### Food/Beverages

- food and beverage expenditure was assigned on the basis of number of person-nights spent in any of the 12 Ontario regions. For same-day travel (0 person-nights), the expenditure accrues to the region of main destination (or furthest point).

#### Recreation/Pleasure

- expenditure was assigned on the basis of number of person-nights spent in any of the 12 Ontario regions. Same day travel expenditure accrues to the region of main destination (or furthest point).

#### Retail/Other Miscellaneous

- expenditure was assigned to region of main destination (or furthest point).

b) **Non-Ontario Destination Travel**

**Automobile**

- expenditure outside Ontario was assigned to main destination (USA, Other Province, Other Country).
- if expenditure was also in Ontario, it was assigned on the basis of number of person-nights spent in any of the 12 Ontario regions. If no overnight stops made in Ontario, the expenditure accrued to the Ontario region of origin.

**Local Transportation**

- expenditure assigned to region of main destination (USA, Other Province, Other Country).

**Air/Train/Bus/Ship**

- if Canadian Carrier indicated, expenditure was assigned to Ontario region of origin.
- if Foreign Carrier indicated, any expenditure made in Ontario or outside Ontario was assigned to USA or Other Country main destination.

**Accommodation**

- expenditure outside of Ontario was assigned to main destination (USA, Other Province, Other Country).
- if expenditure also in Ontario, it was assigned on basis of number of person-nights spent in any of the 12 Ontario regions.

**Food/Beverage**

- expenditure outside Ontario was assigned to main destination (USA, Other Province, Other Country).
- if expenditure was also in Ontario, it was assigned on basis of number of person-nights spent in any of the 12 Ontario regions. If no overnight stops made in Ontario, it was assigned to a separate destination category "Ontario Unspecified".

**Recreation/Pleasure**

- expenditure outside Ontario was assigned to main destination (USA, Other Province, Other Country).
- if expenditure was also in Ontario, it was assigned on basis of number of person-nights spent in any of the 12 Ontario regions. If no overnight stops made in Ontario, it was assigned to a separate destination category "Ontario Unspecified".

### **Retail/Other Miscellaneous**

- expenditure outside Ontario was assigned to main destination (USA, Other Province, Other Country).
- if expenditure was also in Ontario, it was assigned to a separate destination category "Ontario Unspecified".

Total amount accruing to "Ontario Unspecified" category was allocated to Travel Association Areas 1, 2, 6, 7, 9, 10, 11, 12, according to these rules:

- determined total same day expenditure (excluding pre-paid package expenditure) for each of Food/Beverage, Recreation/Pleasure, and Retail/Miscellaneous items, and on Ontario destination trips only, for each of the above given travel areas.
- determined percentage split of each expenditure item separately, amongst the given travel areas.
- allocated expenditures indicated for Food/Beverage, Recreation/Pleasure and Retail/Other Miscellaneous, according to percentage split amongst given travel areas.

## E. WEIGHTING AND ESTIMATING PROCEDURES

### 1. The General Model

The objective is to provide trip and expenditure estimates for a defined period such as 1982 or a quarter in 1982. The simplest conceptual method is to calculate the average number of trips per household per month, multiply by the number of households in Ontario, and multiply by the months in the time period being estimated, i.e.:

$$\begin{array}{lcl} \text{Average H/H} & & \text{Ont. H/H} \\ \text{Trips/Month} & \times & \text{Population} \times 12 = \text{Estimate of} \\ & & \text{1982 trips.} \end{array}$$

As

$$\begin{array}{lcl} \text{Average} & \text{Total Trips/Mo.} & \text{Ontario Pop.} \\ \text{Trips/Month} = & \text{Sample of H/H's} & \text{and Sample H/H} = \text{Population} \\ & & \text{Projection} \\ & & \text{Factor,} \end{array}$$

the estimation procedure becomes:

$$\text{Total Trips/H/H} \times \text{Population Projection} \times 12 = \text{1982 Trips.}$$

### 2. Special Factors

There are some special factors specific to the Ontario Travel Study that have to be taken into account when applying the estimating model.

- i) Data were collected during 1982 with 12 monthly samples. The January to November samples reported for a two-month period and the December sample for December only. This means that there are data for each of the calendar months from two-monthly samples, except for January. To balance the data by month, the January data from the January sample were duplicated to create a "phantom" set of data for January, as if there had been a December 1981 sample reporting for the second month (January, 1982).
- ii) After the creation of the phantom January sample, we had 24 separate months of data and 13 separate samples of households (12 monthly samples + phantom). To obtain a correct estimate of average trips per household per month requires equal numbers of monthly trip data and samples. Thus, as the data stand they would over-estimate trips by a factor of  $24 \div 13$ .

To correct for this, the estimation model becomes for a year:

$$\begin{aligned} & \text{Trips} \times \text{H/H Projection Factor} \times 12 \times \frac{13}{24} \\ &= \text{Trips} \times \text{H/H Projection Factor} \times 6.5. \end{aligned}$$

For estimates of other time periods, such as a quarter, the time period correction factor will change. This is illustrated below for a quarter.

For a typical quarter, the samples and data months will be as follows:

	Monthly Samples			
	<u>M<sub>0</sub></u>	<u>M<sub>1</sub></u>	<u>M<sub>2</sub></u>	<u>M<sub>3</sub></u>
First Data Month		X	X	X
Second Data Month	X	X	X	

For a quarter of months M<sub>1</sub>, M<sub>2</sub> and M<sub>3</sub> we have 4 monthly samples and 6 sets of monthly data. This means that trips will be over-estimated by a factor of  $6 \div 4$ . Therefore, the estimation model becomes:

$$\begin{aligned} & \text{Trips} \times \text{H/H Projection Factor} \times 3 (\text{months}) \times \frac{4}{6} \\ &= \text{Trips} \times \text{H/H Projection Factor} \times 2. \end{aligned}$$

The data for the estimating model are obtained after a number of weighting procedures designed to equalize the samples by month and reflect the known demographics of Ontario are applied. Each stage is described below.

### 3. Best Estimates Of Aggregate Trips

#### 1. Equalizing Monthly Sample Sizes

The estimating model requires that each of the monthly samples is of equal size. Therefore, the first stage of sample adjustment was to equalize all monthly samples. This was done by standardizing across the year to a figure of 350 households per month.

For each interviewing month, a correction factor was calculated to bring the actual monthly sample size to a weighted sample size of 350. The actual sample sizes and adjustment factors are as follows:

<u>Month</u>	<u>Sample</u>	<u>Weight</u>	<u>Month</u>	<u>Sample</u>	<u>Weight</u>
Jan.	444	0.7883	July	355	0.9859
Feb.	382	0.9162	Aug.	322	1.0870
Mar.	345	1.0145	Sept.	351	0.9972
Apr.	381	0.9186	Oct.	350	1.0000
May	341	1.0264	Nov.	347	1.0086
June	350	1.0000	Dec.	344	1.0174

## 2. Correlating For Regional Imbalance

The initial sample was drawn proportionate to population with geographic regions of the province as a stratification in the EA file. The proportion of the sample in each region was influenced by two factors:

- a) Differential response rates.
- b) The sample was drawn on the basis of 1976 Census data but for estimating purposes, the 1981 Census data had become available.

The weights for regional correction are:

<u>Region</u>	<u>Weight</u>
Southwestern	0.78
Festival Country	1.05
Georgian Lakelands	0.79
Metro Toronto	1.42
Central Ontario	0.97
Ontario East	0.77
Ontario North	0.88

## 3. Adjustment For Household Composition

A special analysis was obtained from the 1981 Census showing, in total, and for each region, the household composition in terms of number of adults (15+) and number of children (under

15). The variation between regions was found to be small and, therefore, the sample data were adjusted by ratio weighting to a matrix of 9 cells as shown below, based on the total province. Weights are as follows:

<u>Number of Adults:</u>	<u>Number of Children</u>			
	<u>0</u>	<u>1</u>	<u>2</u>	<u>3+</u>
1	2.14	1.40		
2	1.01	0.84	0.78	0.83
3+	0.77	0.85	0.84	

#### 4. Projection To Population

The target population is all households in Ontario. As the study was conducted throughout 1982, we have used our estimate of total households as of June 1982. This estimate was calculated using the 1981 Census data and other Statistics Canada information. We calculate that the number of households increased by 1.39 per cent between June 1981 and June 1982, giving an estimated household population of 3,010,000.

The expansion factor for the annual data is 0.66154.

## F. SAMPLING ERROR

The accuracy of estimates derived from surveys is influenced by two main factors:

- a) Sampling errors;
- b) Methodological factors such as bias, missed reporting, non-response, etc.

If the second type are assumed to be small, the confidence levels for particular parameters in a survey can be calculated mathematically. One specific check on response bias was possible. At the recruitment interview, people were asked for overnight trips by people in the household taken in the previous month. Thus, their data could be examined for people who completed the diary and those that did not. The difference was small, with non-diary completers having slightly lower estimates.

### 1. Variance Formula

To estimate the sampling errors in the Ontario Travel Study, a variance formula has been derived. It takes into consideration the twelve independent monthly subsamples and the two-month reporting period employed in the survey design.

The variance formula is shown using the following notations:

Let the monthly subsamples be denoted by  $i = 0, 1, 2, \dots, 12$ , where  $i = 0$  represents the phantom December sample.

Also let

- |        |   |  |
|--------|---|--|
| $X_i$  | = | total trips reported in the first reporting month for the $i$ -th subsample after applying the first two stages of weighting*; |
| $Y_i$  | = | similar definition as above for the second reporting month;  |
| $VX_i$ | = | variance of the trip figures in the household population for the first reporting month for the $i$ -th sample;                 |
| $VY_i$ | = | similar definition as $VX_i$ for the second reporting month;   |
| $N_i$  | = | weighted sample size for the $i$ -th subsample;  |
| $C_i$  | = | covariance of the reported values between the two months for the $i$ -th subsample.  |

\* Refer to section Estimation Procedure.

The annual estimate of total number of trips (T) is

$$T = \frac{3010}{4550} \times \frac{13}{24} \times 12 \times \left[ \sum_{i=1}^{12} X_i + \sum_{i=0}^{11} Y_i \right]$$

$$= 4.3 \times \left[ \sum_{i=1}^{12} X_i + \sum_{i=0}^{11} Y_i \right]$$

The sampling variance of T is

$$V(T) = (4.3)^2 \times \left[ \sum_{i=1}^{12} V X_i N_i + \sum_{i=0}^{11} V Y_i N_i + 2 \sum_{i=1}^{11} C_i N_i \right]$$

Estimates for quarterly totals can be computed by inserting the appropriate indices representing the subsamples for a specific quarter into the three summation signs. For example, estimate for the first quarter total (Ti) is

$$T_i = 4.3 \times \left[ \sum_{i=1}^3 X_i + \sum_{i=0}^2 Y_i \right]$$

The corresponding sampling variance is

$$V(T_i) = (4.3)^2 \times \left[ \sum_{i=1}^3 V X_i N_i + \sum_{i=0}^2 V Y_i N_i + 2 \sum_{i=1}^2 C_i N_i \right]$$

## 2. Sampling Tolerances

Sampling errors for annual estimates and estimates of a typical quarter have been computed and are shown below. The formula used was:

$$\% \text{ confidence interval} = \pm \frac{2\sqrt{V(T)}}{T} \times 100\%$$

This provides a 95% confidence level, i.e., there is a 95% chance that the true figure will not fall outside the estimated value  $\pm$  the

confidence level.

The tables can be used to approximate percentage errors for items not shown. For example, 9.67% of the annual total household trips were made to Non-Ontarian destinations. Although not computed its confidence interval can be approximated by dividing the percentage error of the overall total household trips by the square root of 0.0967. Example:

Confidence interval of total household trips = 4.1%

For Non-Ontario trips  $4.1 \div \sqrt{0.0967} = 13.2\%$

#### CONFIDENCE INTERVALS: 95% CONFIDENCE LEVEL

**HOUSEHOLD QUESTIONNAIRE**

**TRIP DIARY**

## HOUSEHOLD QUESTIONNAIRE

LOCATION NUMBER: HOUSEHOLD NUMBER: 

(ALL RESPONDENTS)

1. Have you been a resident here for more than four weeks?

YES ..... 22-1

NO ..... 2

2 USE SPECIAL INSTRUCTIONS  
FOR QUESTION 3-a) AND 4-a)

2. Including yourself, how many people live in this household aged 15 years or more?

TOTAL HOUSEHOLD MEMBERS

15 YEARS OR MORE: 

23-24-

- 3-a) Have there been any trips taken by members of your household 15 and over which involved any overnight stays during the last month--that is, since this date last \_\_\_\_\_ (SPECIFY MONTH)?

- b) (IF YES) How many such trips have there been? A person travelling alone counts as one trip. If two or more household members travel together, this also counts as one trip.

NUMBER OF TRIPS: 

25-26-

(IF NO, RECORD "00" ABOVE AND GO TO QUESTION 5)

(ALL OVERNIGHT TRIP TAKERS)

I would now like to get some further information about these trips.

Beginning with the most recent trip ...

- 4-a) (HAND CARD) What was the distance from your home to the furthest destination? (RECORD BELOW)

- b) Was the main purpose of this trip, work or was it some other reason? (RECORD BELOW)

- c) (IF MAIN PURPOSE WORK) Was this trip part of a sales call or while working as a crew? (RECORD BELOW)

- d) Including yourself, how many persons 15 years and older, now living in this household, went along on that trip? (RECORD NUMBER BELOW)

(REPEAT QUESTIONS 4-a) TO -d) FOR UP TO 3 MOST RECENT TRIPS.)

"And for the overnight trip before that ...?"

		OVERNIGHT TRIPS		
		MOST RECENT	SECOND MOST RECENT	THIRD MOST RECENT

		31- <input type="text"/>	36- <input type="text"/>	41- <input type="text"/>

## ALL RESPONDENTS

5. To obtain an accurate measure of the trips that people living in Ontario make within and outside the province, we are asking households to keep a diary that we provide. In it you will record information on any longer trips that you or other people in this household may make. I will call back in two months' time to collect the diary and deal with any problems. Of course, we realize that some households may not take any trips during this time while others may take several trips. The information you provide will be very useful in planning good travel facilities for the people of Ontario.

(EXPLAIN LUCKY DRAW) As a small token of our appreciation for the important contribution people in Ontario will make to this project, we plan to run a lucky draw. Everyone who keeps a trip diary, whether any trips were taken or not, will have a chance to win a cash prize of \$300.00.

The odds for this cash prize are excellent as only about 300 people will be entered in the draw. About three weeks after pick-up of the diary, the winner will be notified by telephone and asked to complete a simple skill testing question.

(ANSWER ANY QUERIES AS OUTLINED IN THE MANUAL.)

RESPONDENT AGREES

TO ACCEPT DIARY ..... 42- 1 GO TO DIARY INSTRUCTIONS

RESPONDENT WILL NOT

AGREE ..... 2 SEE NEXT PAGE

IF WILL NOT ACCEPT DIARY:

I am sorry that you are unable to complete the diary. We would like to know when we do our analyses whether the people who do accept the diary are typical of all the different households in Ontario. I hope you will answer a few more questions so that we can do that.

- 6-a) Are there any children under 15 years of age living at home?

YES ..... 43-1

NO .....  GO TO Q. 7

## TRIP DIARY

This diary is for recording trips taken by any member of your household who is 15 years or older.

For this survey, a trip means anytime you or any member of your household travels to a place at least 25 mi/40 km (one way) from your permanent residence.

The following types of trips should not be included in this study even if they meet the minimum distance requirement.

- commuting to school or work
- travelling as an operator or crew member
- sales calls or deliveries
- moving to a new residence

Include in your household diary all trips that end during

\_\_\_\_\_ and \_\_\_\_\_, 1982

Include trips of this distance that involve overnight stays as well as those that do not. Make sure that you include trips of this distance to places such as a cottage, farm, chalet. Also, don't forget to include trips outside of the province as well as those within.

For the purpose of recording which household members, 15 years and over, went on a trip, please use the diary code indicated below.
